

**CN Lighting Series leads the way in local manufacturing of aviation lighting systems.**

## INNOVATION, RESEARCH, TECHNOLOGY, SERVICE

CN Lighting Series is a well established, sustainable South African technology company that manufactures locally high quality, ultra high luminance LED lighting systems for the aviation industry. Our wide range of products include the following lighting systems:

- LED Strobe lights for aircraft
- LED Drone Lights for aircraft
- LED Landing lights for aircraft
- LED Airport and Runway lights
- LED Heliport lights
- Control Systems
- LED Illuminated Windsocks
- LED Navigation / Obstruction lights

**CN Lighting Series supports the development of the South African economy.**

CN Lighting's LED lighting systems are manufactured of high quality components and are tested and certified by the South African Bureau of Standards (SABS) and comply with ICAO Annex 14 standard. We maintain commonly the best possible aviation standards to manufacture products that comply with the highest possible criterion, a critical requirement for any aviation product.

LED lights also have a minimum of 50,000 – 80,000 hours of life that proves the quality of all our products. Furthermore, our LED lighting systems guarantees approximately 90% electricity saving to conventional runway lighting systems. Although our products are available at affordable prices comparing to other similar imported and expensive products, we never compromise quality or standard.
